                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 15, Application US/09813653
Patent No. US2002064770A1
GENERAL INFORMATION:
APPLICANT: Watson, Carol
APPLICANT: Walson, Carol
APPLICANT: Walson, Carol
APPLICANT: Walson, Carol
APPLICANT: Walson, Carol
APPLICANT: See, Raymond
APPLICANT: See, Raymond
APPLICANT: Tan Hehir, Christina
TITLE OF INVENTION: Binding Compounds
FILE REPERENCE: CNS-005
CURRENT APPLICATION NUMBER: US/09/813,653
CURRENT FILING DATE: 2001-03-20
PRIOR FILING DATE: 2000-03-21
PRIOR PAPLICATION NUMBER: US 60/190,96
PRIOR APPLICATION NUMBER: US 60/190,96
PRIOR APPLICATION NUMBER: US 60/191,299
PRIOR PILING DATE: 2000-03-21
PRIOR PILING DATE: 2000-03-21
SPRIOR PILING DATE: 2000-03-21
SUPTWARE: Patentin version 3.0
                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-779-880A-22

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2, Application US/09339912A;
Sequence 2, Application US/09339912A;
Patent No. US20020099176A1
GENERAL INFORMATION:
APPLICANT: Li, Yi,
APPLICANT: Ruben, Steven, M.
TITLE OF INVENTION: (CCR5 Receptor)
CURRENT APPLICATION NUMBER: US/09/339,912A
CURRENT PILING DATE: 1999-06-25
PRIOR FILING DATE: 1999-06-25
PRIOR FILING DATE: 1999-06-06
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0
SEQ ID NO 2
LENGTH: 352
                                                                                                                                                 Sequence 2, Application US/09195662A
Sequence 2, Application US/09195662A

ZIP: 92660

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: DEADLE PC-DOS/MS-DOS
SOFFWARE: PATENTE PC-DOS/MS-DOS
SOFFWARE: PATENTE PC-DOS/MS-DOS
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/9938,703
FILING DATE: 2001
CLASSIFICATION: ~UNKnown>
PRIOR APPLICATION: ~UNKnown>
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 34,115
REGISTRATION NUMBER: 34,115
REGISTRATION NUMBER: 34,115
REGISTRATION NUMBER: 34,115
REFERENCE/POCKET NUMBER: ~Unknown>
INFORMATION FOR SEQ ID NO: 5:
SEQUENCE CHARACTERISTICS:
LENGTH: 352 amino acide
TYPE: amino acide
TYPE: amino acide
TYPE: protein
          COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/939,226
FILING DATE: 24-Aug-2001
CLASSIFICATION: «Unknown»

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

probable 2-phosphoglycerate kinase - Pyrococcus horikoshii

grobable 2-phosphoglycerate kinase - Pyrococcus horikoshii

C;Species: Pyrococcus horikoshii

C;Accession: C71236

Divolable zinc-finger protein - Arabidopsis thaliana
NyAlternate names: protein T17013.200
CySpecies: Arabidopsis thaliana (mouse-ear cress)
CySpecies: Arabidopsis thaliana (mouse-ear cress)
CyBate: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 20-Apr-2000
CyAccession: T48016
RyRieger, M.; Mueller-Auer, S.; Zipp, M.; Schaefer, M.; Mewes, H.W.; Lemcke, K.; Mayer, is ubmitted to the Protein Sequence Database, February 2000
A;Referse number: Z24482
A;Recession: T48016
A;Status: preliminary

Hum. Retroviruses 15:931-939(1999).

- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
                                                                                                                                                                                                                                                                         Gaps

-I. FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANIES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```

increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or

increases...
in the control of gramulouy...
differentiation.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
SIMILARITY: Belongs to family 1 it is produced through a collab

RI "Sequence evolution of the CCR5 chemokine receptor gene in primates.";

RI "Sequence evolution of the CR5 chemokine. Binds to MIP-1-alpha,

CC "FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

CC "Increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.

CC differentiation.

CC -: SUBCELLULAR LOCATION: Integral membrane protein.

CC -: SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

-! FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Biol. Evol. 16:1145-1154(1999).

-! FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-MAR-2004 (Rel. 43, Created)

Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RAWTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or
                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  15-JUL-1998 (Rel. 36, Created)

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Trachypithecus francoisi (Francois' langur) (Indochinese langur).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zhang Y.-W., Ryder O.A., Zhang Y.-P.,

"Sequence evolution of the CCRS chemokine receptor gene in primates.";

"Sequence evolution of the CCRS chemokine. Binds to MIP-1-alpha,

Mol. Biol. Bvol. 16:1145-1154(1999).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role

in the control of granulocytic lineage proliferation or

differentiation.

-!- SUBCELIULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

C. I. FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and Subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
C. I. SUMCERLULAR LOCATION: Integral membrane protein.
C. I. SUMLARITY: Belongs to family 1 of G-protein coupled receptors.

TISSUE SPECIFICITY: Detected in the heart, spleen, lung, peritoneal exudate cells and leukocytes.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                 Mus musculus (Mouse).

Sul N., Treboute C., Gomas E., Ferchal F., Alizon M.;

Submitted (Un1-1997) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin,

MCP-3, MCP-4 and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors. Cercopithecus aethiops (Green monkey) (Grivet).

Bukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Cercopithecidae;
Cercopithecinae; Cercopithecus.

PATHWAY: Cyclic peptide antibiotic surfactin biosynthesis. SIMILARITY: Belongs to the ATP-dependent AMP-binding enzyme

-1- SIMILARITY: Contains 3 acyl carrier domains

-!- FUNCTION: PART OF THE BINDING-PROTEIN-DEPENDENT TRANSPORT SYSTEM FOR FERRIC ENTEROBACHTIN. PROBABLY RESPONSIBLE FOR THE TRANSLOCATION OF THE SUBSTRATE ACROSS THE MEMBRANE.
-!- SUBCELLIARA LOCATION: Integral membrane protein. Inner membrane.
-!- INDUCTION: Controlled in part by the amount of available iron.
-!- SIMILARITY: Belongs to the binding-protein-dependent transport system permease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Shea C.M., McIntosh M.A.;

Nature 390:249-230(1997).

-!- FUNCTION: This protein is a component of an oligopeptide permease, a binding protein-dependent transport system. This APP system can completely substitute for the OPP system in both sporulation and genetic competence, though, unlike OPP, is incapable of transporting tripeptides. Probably responsible for the translocation of the substrate across the membrane (By

Similarity).
SUBCELLULAR LOCATION: Integral membrane protein (Potential).
SIMILARITY: Belongs to the binding-protein-dependent transport system permease family. OppBC subfamily.
